3. GLOSSARY

AVERAGE OCCUPANCY RATE

(Occupancy rate) is rooms occupied divided by rooms available. Occupancy is always displayed as a percentage of rooms occupied. Operating capacity is taking into consideration number of operating days in the month, and full capacity is taking into consideration calendar days.

AVAILABLE ACCOMODATION UNITS (ROOMS)

represent the sum of all daily available rooms during calendar days minus the rooms that are out of service.

OCCUPIED ACCOMODATION UNITS (ROOMS)

represent the sum of all daily occupied rooms during calendar days.

AVERAGE DAILY RATE (ADR) is calculated by dividing room revenue by occupied rooms. Room revenue is made by renting the accommodation to guests (per hour, day or longer). If you are offering full or half board, or bed and breakfast, than you need to separate food and beverage revenue from room revenue. The room revenue also includes charged or calculated revenue from no shows (guests who didn't arrive), late check outs etc.

REVENUE PER AVAILABLE ROOM RevPAR is calculated by dividing room revenue by rooms available.

TOTAL REVENUE PER AVAILABLE ROOM TRevPAR

Is calculated by dividing Total room revenues (Room Revenue, Food & Beverage Revenue, Wellness & SPA Revenue, Health & Sports Revenue, Convention Revenue and other Operated Revenues) by rooms available.

TOTAL REVENUE PER OVERNIGHT calculated by dividing Total Revenue by Total overnights.
